SUMMARY

Computer Science undergraduate with strong experience in **software development**, **backend systems**, and **scalable application design**. Skilled in **Python**, **Javascript**, and modern web technologies with a solid understanding of **SDLC**, **data structures**, and **algorithms**. Experienced in building and optimizing **production-grade systems**, writing **unit and integration tests**, and collaborating in **Agile environments**. Quick learner with a strong **problem-solving mindset** and ability to contribute effectively to **engineering teams**.

TECHNICAL SKILLS

Programming: Python, Javascript

Backend Development: FastAPI, Django, REST APIs, Microservices Architecture

Frontend: React.js, TypeScript, NextJs

Databases: PostgreSQL, MySQL, Redis (query optimization, indexing)

Cloud & Tools: AWS (EC2/S3), Docker, Git, CI/CD

Core Concepts: Data Structures & Algorithms, OOP, SDLC, Testing, Debugging, Low Level Design, High Level Design

WORK EXPERIENCE

SDE INTERN | Surya Digital | Bengaluru, Karnataka

Sep 2025 – March 2026

- Architected and implemented **backend services** for Yafika Backoffice using **Kotlin**, and **RPC**, reducing **production bugs** by **90%** through comprehensive **automated unit testing** and rigorous **code reviews**.
- Designed and deployed **RPC definitions** for AI Session History along with full **client-side implementation**, enabling seamless **session tracking** and improving **platform reliability** for enterprise users.
- Engineered critical **banking transaction flows** for Redeem Back-Office Agency Banking, including request and check **move funds** functionality, ensuring **transaction integrity** with extensive **unit test coverage**.
- Optimized **database queries** across multiple services, resulting in improved **query execution times** and enhanced **system responsiveness** for high-volume operations.
- Collaborated with **cross-functional teams** following **Agile SDLC practices** to define **technical requirements**, conduct **code reviews**, and maintain **high code quality standards** in a **fast-paced development environment**.

PYTHON DEVELOPER INTERN | Zapuza Technologies| Remote

Nov 2024 – Apr 2025

- Contributed to a **production-grade backend system** serving **1,000+ daily active users**, developing new features and refactoring existing code to improve **maintainability** and **performance**.
- Reduced average **API response time** by **50%** through strategic **database query optimization**, **indexing**, and implementation of **Redis caching** strategies, significantly enhancing **user experience**.
- Collaborated with **senior engineers** to identify **performance bottlenecks** and implement **scalable solutions**, ensuring **system stability** during peak traffic periods.
- Participated in **daily stand-ups**, **sprint planning**, and **code reviews**, adhering to **Agile methodologies** and **best practices** for software development.

PROJECTS

CAREERBOOKLET – MICROSERVICES-BASED BLOG & JOB PLATFORM

- Designed and implemented a **microservices architecture** with three independent services (**Auth**, **Profile**, **Blog**) using **FastAPI**, **JWT** with **refresh token rotation**, and **Docker** containerization for **loose coupling** and **independent deployability**.
- Engineered **PostgreSQL database schemas** with **composite indexing**, **query optimization**, **pagination**, and **soft delete patterns**, achieving **~30% reduction** in **API latency** and **query execution time** through **connection pooling** and **prepared statements**.
- Containerized all services using **Docker** with **multi-stage builds**, reducing **image size** by **40%**, and implemented **API Gateway** for centralized routing and **request management**.

SERVICE SPHERE – MULTI-CLIENT SERVICE PLATFORM

- Built a **full-stack service platform** using **Django** and **MySQL** with **real-time availability tracking**, **secure payment flow**, and **transaction management** ensuring **atomicity** for booking and payment operations.
- Optimized complex **SQL queries** involving multiple **joins** and **aggregations**, reducing average **response time** by **~40%** through strategic **indexing**, **query restructuring**, and **lazy loading** techniques.
- Designed **role-based access control (RBAC)** for three user types with custom **middleware**, and deployed using **CI/CD pipeline** with **automated testing** for consistent releases.

EDUCATION

BACHELOR'S DEGREE | Computer Science & Engineering | Alliance University | CGPA: 8.7

2022 –2026

AWARDA AND CERTIFICATIONS

FASTAPI & ASYNC APIS | Udemy

June 2025

MVP | Zapuza Technologies

May 2025

ALLIANCE TECHATHON AWARD | Face Prep

May 2025

SOFTWARE ENGINEER INTERN | HackerRank

April 2025
